30-60-90 DAY STRATEGIC IMPACT PROPOSAL

ROLE: CHIEF OF STAFF (AI & DATA-DRIVEN STRATEGY)

Target Organization: StarApps Studio LLP (Baner, Pune)

Candidate: Anas Wahab | anas@ainexlifyagencies.com | Immediate On-site Relocation to Pune
Target Executive Partner: Shashank Agrawal (Co-founder & CEO) & Santosh Singh (Co-founder & CTO)

EXECUTIVE SUMMARY & THESIS

StarApps Studio represents the gold standard of bootstrapped SaaS excellence in India: **31 employees generating ~$6M ARR across 30,000+ global merchants and 2,500+ Shopify Plus stores**.

However, scaling from ~$6M ARR toward $15M+ ARR introduces three critical operational pressure points:

1. **The Post-Merger Integration Friction (AppMaker Acquisition, July 2026):** Merging a standalone mobile app builder powering $100M+ GMV into StarApps requires aligning customer success, cross-selling across the 30k merchant base, and unifying metric reporting without slowing down product shipping.
2. **Support Latency & Theme Incompatibility Tax:** In the Shopify ecosystem, themes constantly update (Dawn, Prestige, Impulse). Liquid and CSS overrides cause variant swatch and automator script collisions. Fahad Shaikh's Customer Success team spends valuable hours manually troubleshooting store DOMs via DevTools.
3. **CEO Cognitive Load & Bandwidth Saturation:** Shashank Agrawal and Santosh Singh remain the primary decision bottlenecks across product evolution (SA Variants Pro, Shopify Editions updates), enterprise relationships (Levi's, Vero Moda, Jack & Jones), and hiring.

My Role as Chief of Staff: To operate as a **"Zero-Engineering-Tax Force Multiplier"**. I do not build slide decks for developers to execute. I build autonomous, resilient internal automations (Python, n8n, Supabase, LLM APIs) and manage cross-departmental delivery, freeing 15+ hours/week of founder bandwidth while directly protecting and expanding ARR.

THE 30-60-90 DAY EXECUTION ROADMAP

30-60-90 DAY HORIZON		
DAYS 1 - 30 "Operational Audit & Friction Mapping"	DAYS 31 - 60 "Automated Support Deflection & CS Triage Intelligence"	DAYS 61 - 90 "AppMaker Cross-Sell Engine & Ecosystem Moat Defense"
• Map support tickets • Audit AppMaker churn • Establish Executive Scorecard for CEO	• Deploy automated theme-conflict diagnostic agent • Reduce L1 resolution time by 40% with zero SWE tax	• Build automated merchant intent & cross-sell radar • Launch Agency Partner automated co-marketing ops

PHASE 1: DAYS 1 – 30 | OPERATIONAL AUDIT & FOUNDER DE-BOTTLENECKING

Primary Objective: Map operational leakage, absorb ad-hoc founder fires, and establish daily executive cadence.

1. **Executive Shadowing & Time-Audit:**
   - Shadow Shashank Agrawal across cross-functional reviews, enterprise customer requests, and partner discussions.
   - Categorize all CEO time sinks into: Strategic (Keep), Delegable (Absorb), and Automateable (Eliminate).
   - Target: Reclaim **8 to 12 hours/week** of founder time within the first 21 days.
2. **Customer Success & Theme Diagnostic Audit (Partnering with Fahad Shaikh):**

- Audit the last 500 support conversations across Color Swatch King, Variant Image Automator, and SA Variants Pro.
- Isolate the top 5 repeat root causes: (e.g., Theme 2.0 app block positioning, CSS selector clashes, conflicting third-party inventory apps).
- Document exact merchant drop-off patterns during trial onboarding.

3. **AppMaker Post-Merger Health Check:**
   - Audit trial-to-paid onboarding for AppMaker (`appmaker.xyz`).
   - Identify where merchants stall between design preview and App Store/Google Play publishing (e.g., Apple Developer Account setup hurdles, push notification configuration).
   - Construct an automated Slack alert pipeline flagging stalled trials over 72 hours for high-touch intervention.
4. **Deliverable at Day 30:**
   - StarApps Executive Pulse Dashboard: A unified weekly operational view tracking Net MRR movements, trial-to-paid conversion by app, AppMaker migration milestones, and L1 support backlog.

PHASE 2: DAYS 31 – 60 | CS DEFLECTION PIPELINE & SELF-HEALING AUTOMATION

Primary Objective: Cut support overhead and protect app ratings by automating technical diagnosis without engineering sprints.

1. **Build AI-Assisted Theme Conflict Diagnostic Tool:**
   - **The Architecture:** An event-driven webhook pipeline using Python and headless Chrome (Puppeteer) triggered when a merchant submits a support ticket with their `.myshopify.com` store URL.
   - **Autonomous Execution:**
     - The tool automatically navigates to the merchant's product page.
     - Inspects DOM injection for StarApps scripts (`swatch-king.js`, `variant-automator.js`).
     - Detects console errors, hidden Liquid container tags, and CSS `display: none` or `z-index` collisions.
     - Pre-populates the internal ticket in Zendesk/Crisp/Freshdesk with exact CSS fix suggestions before a support agent opens it.
   - **Impact:** Slashes L1 ticket triage time from **18 minutes to <90 seconds**; eliminates escalation of CSS bugs to core developers.
2. **5-Star Shopify App Review Defense System:**
   - App Store ranking is the primary distribution moat for StarApps.
   - Build an automated webhook pipeline monitoring App Store reviews in real time:
     - 4 & 5-star reviews trigger automated Slack shoutouts and referral follow-ups.
     - 1, 2, or 3-star reviews trigger immediate P0 alerts with account historical context directly to Fahad Shaikh and CoS for <15-minute merchant outreach before churn solidifies.
3. **Deliverable at Day 60:**
   - Fully functional, deployed automated theme-diagnostic scraper saving **20+ engineering hours weekly** and deflecting 30%+ of manual L1 inquiries.

PHASE 3: DAYS 61 – 90 | REVENUE EXPANSION & ACQUISITION MULTIPLIER

Primary Objective: Monetize the 30,000+ merchant base via programmatic cross-sell to AppMaker and scale agency distribution.

1. **The 30,000-Merchant AppMaker Cross-Sell Engine:**
   - StarApps has 2,500+ Shopify Plus brands and 30,000+ active stores using variant apps.
   - These merchants already trust StarApps with core storefront UX.
   - **The Strategy:** Design an automated qualification engine that scores existing StarApps merchants on mobile traffic indicators, product catalog velocity, and Plus status.
   - Generate personalized, high-context upgrade proposals ("Your mobile conversion on Swatch King is ready for a native iOS/Android mobile app via AppMaker").

- Target: Convert 0.5% of high-volume merchants (**150 stores**) to AppMaker ($199–$499/mo tier) = **$30,000 – $75,000 net new MRR (~₹3 Cr – ₹7.5 Cr annual run-rate)**.

2. **Shopify Editions & Ecosystem Moat Defense:**
   - Monitor Shopify API changelogs, GraphQL updates, and Summer/Winter Editions (e.g. Combined Listings API updates, 2000-variants schema).
   - Maintain competitive teardowns against rival apps (Globo, HulkApps, AvisPlus).
   - Ensure StarApps' "Built for Shopify" badge requirements are systematically met across all 7 apps.
3. **Agency Partner Automation (Supporting Shubham Vats / Shreya Pillai):**
   - Automate the partner onboarding portal (`partners.starapps.io`): auto-issue affiliate tracking, commission notifications, and sandbox store developer licenses.
4. **Deliverable at Day 90:**
   - Operationalized Cross-Sell Machine generating repeatable pipeline for AppMaker, institutionalized partner workflow, and a company-wide execution rhythm operating with zero founder drag.

QUANTITATIVE ROI JUSTIFICATION (FOR ₹28L - ₹32L COMPENSATION)

Value Driver	Quantitative Operational Metric	Annual Financial Impact
Founder Executive Bandwidth	Reclaim 15 hrs/wk for Shashank Agrawal (@ ₹25,000/hr executive value)	**₹1.80 Crore ($215,000)** in executive capacity
Engineering Hour Protection	Deflect theme/CSS support tickets via autonomous diagnostic tools (20 hrs/wk SWE time)	**₹36 Lakhs ($43,000)** in saved developer sprint costs
AppMaker Cross-Sell Expansion	Convert 100 Plus merchants from variant apps to AppMaker @ $250/mo	**₹2.50 Crore ($300,000)** in net new ARR
Trial Churn Prevention	Reduce App Store uninstall rate by 2% via rapid P0 triage and onboarding alerts	**₹45 Lakhs ($54,000)** in protected ARR
Total Measurable Impact	**Combined Enterprise Operational & Revenue Value**	**> ₹5.11 Crore ($612,000)**

The Compensation Math:
A top-of-band salary of **₹30L – ₹32L/year** represents less than **6% of the conservative financial value** unlocked. It is self-funding within the first 60 days.

LOGISTICAL COMMITMENT

- **Location:** 100% committed to relocate immediately to **Baner, Pune** (walking distance to WeWork Eleven West).
- **Work Style:** Full in-person presence alongside founders and leadership; zero remote friction.
- **Notice Period:** Immediate availability (0 days).
